(54) Title: METHOD FOR PROCESSING THE SIGNALS FROM TWO OR MORE MICROPHONES IN A LISTENING DEVICE AND LISTENING DEVICE WITH PLURAL MICROPHONES

(57) Abstract: The invention comprises a method for processing the signals from two or more microphones in a listening device which has a casing holding the microphones, and which further comprises a signal processing unit which is to provide an output signal in correspondence with the microphone signals and suited to the users hearing whereby a receiver unit for delivering the output signal to the user is provided, whereby the signals from the microphones are analysed in order to detect when the casing of the listening device is being touched, whereby further the signal processing of the signal processing unit changes whenever touching of the casing is detected. The invention also comprises a listening device having two or more microphones wherein means are provided for detecting when the casing material is being touched.
